

Mooncl AI Aptos Board

CONNECT BUILDER

Connecting Aptos Ecosystem Partners Effortlessly ➔

What We See

16.7  Million
Active Address

➤ Rapidly growing Aptos ecosystem

Aptos has grown into a thriving ecosystem with over 1,600 active projects — but meaningful collaboration remains fragmented and inefficient.

➤ Difficulty finding collaboration partners

Developers and founders often rely on Discord and Telegram, which are noisy, hard to navigate, and not designed for structured collaboration.

➤ Real collaboration needs more than tools

Today's social tools are noisy and transactional — we believe real collaboration starts with vibe and trust.

Mooncl: AI-driven Aptos Board

Mooncl creates a vibe-driven space for Aptos builders to find partners, powered by AI matchmaking and a smart contract treasury that rewards meaningful community contributions.

AI-driven ➔

Unlike traditional AI that answers your questions, Mooncl's AI agent reads all collaboration posts and helps you find the right people who can solve your problem.

Smart Contract ➔

A smart contract manages a community treasury that rewards active users — funded by businesses who pay APT to promote their posts and reach more collaborators.

Aptos Contract

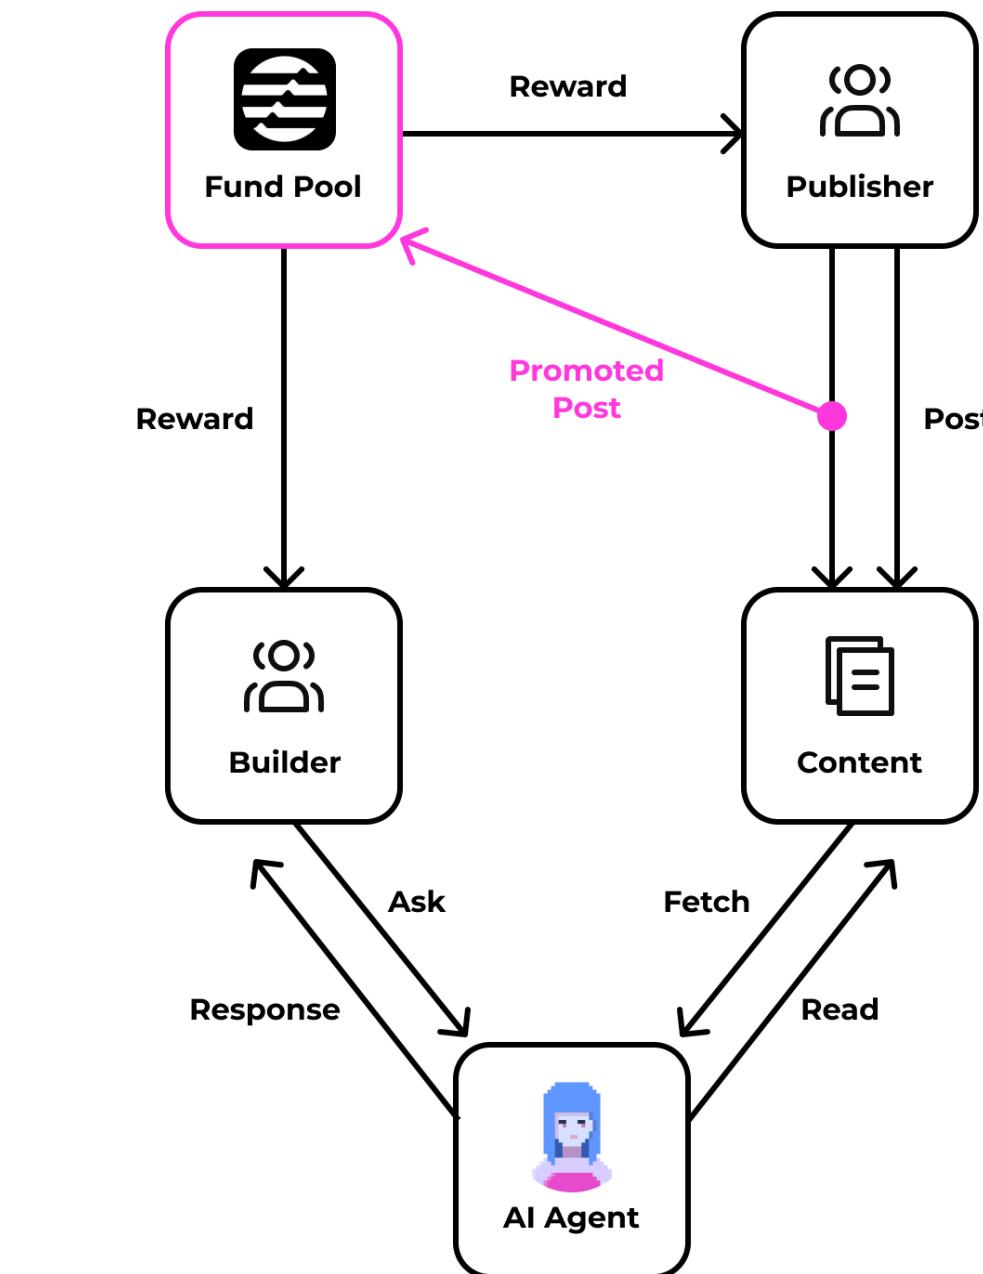

Our smart contract leverages Aptos's Object Model to securely manage an AI-controlled, on-chain treasury pool — ensuring transparent, automated, and contribution-based reward distribution.

➤ Aptos Connect

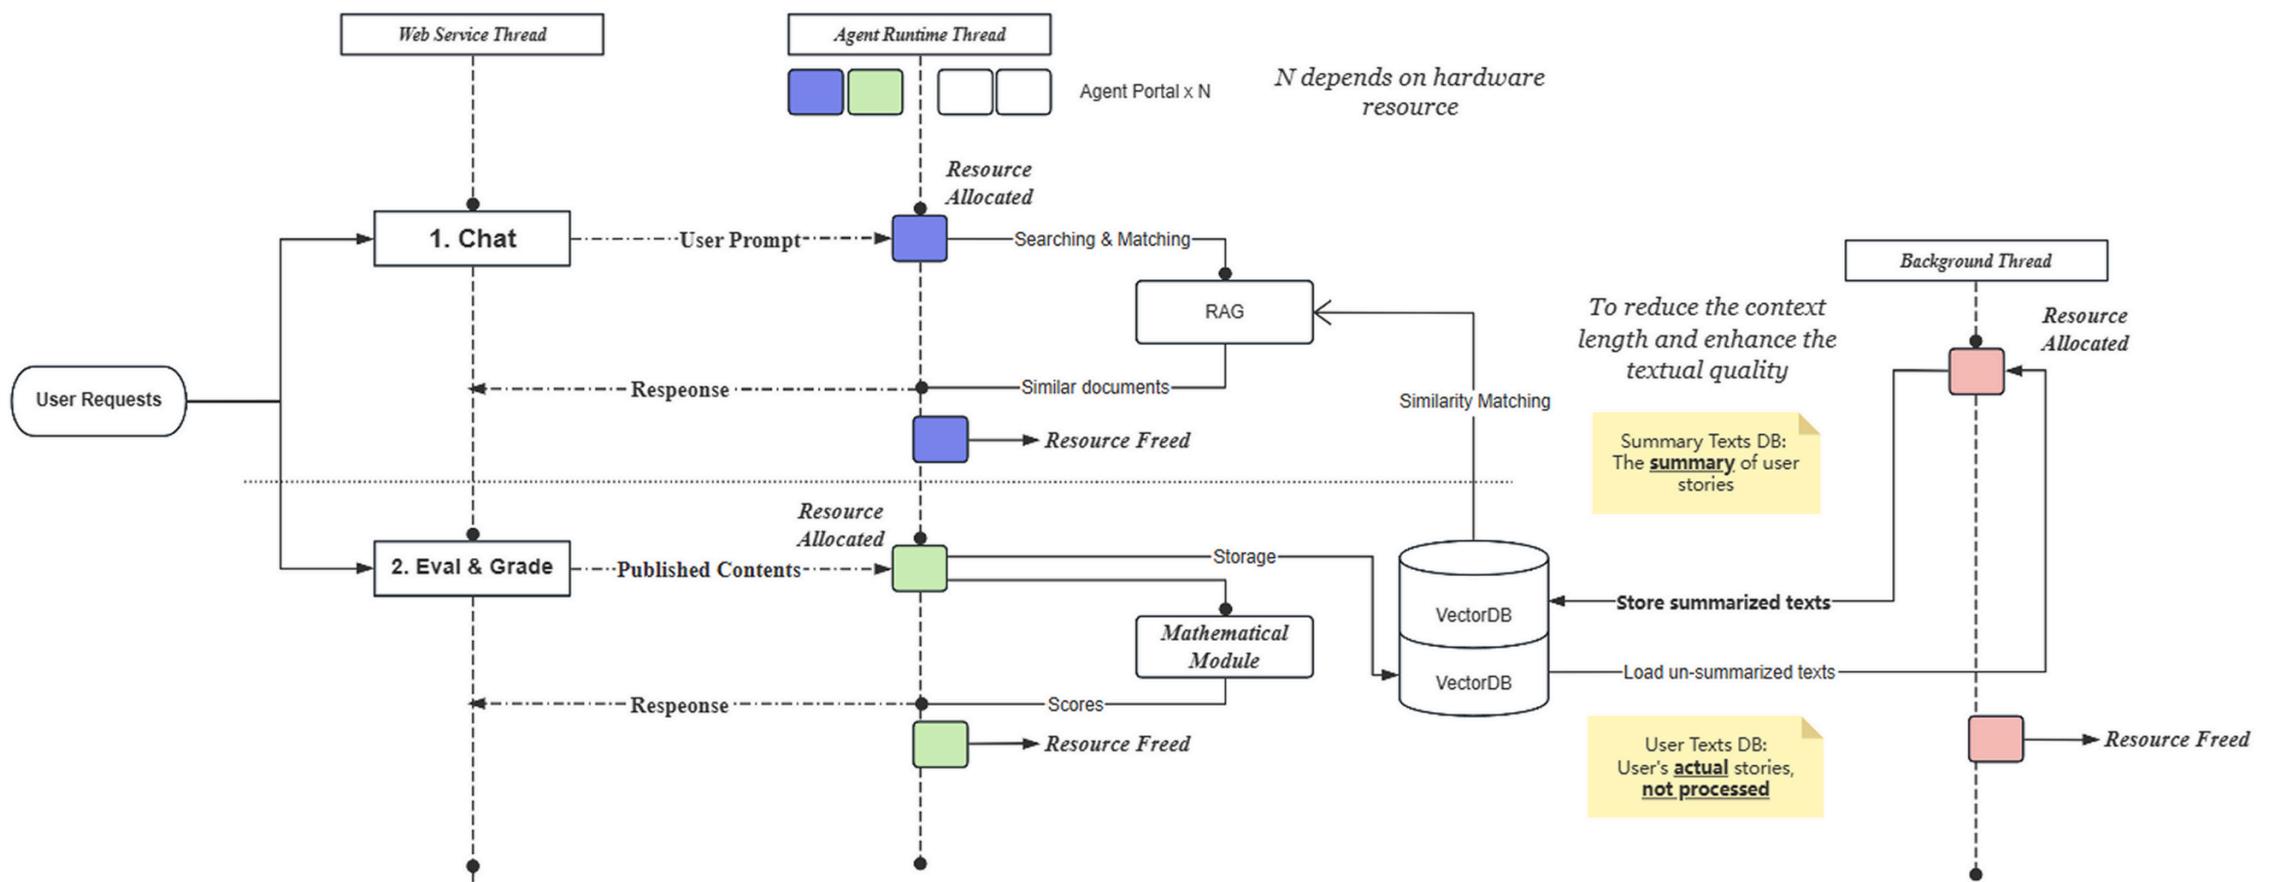

With Aptos Connect, users can log in with Google — no wallet needed — making it easier for newcomers to join and explore the Aptos ecosystem.

➤ Aptos SDK

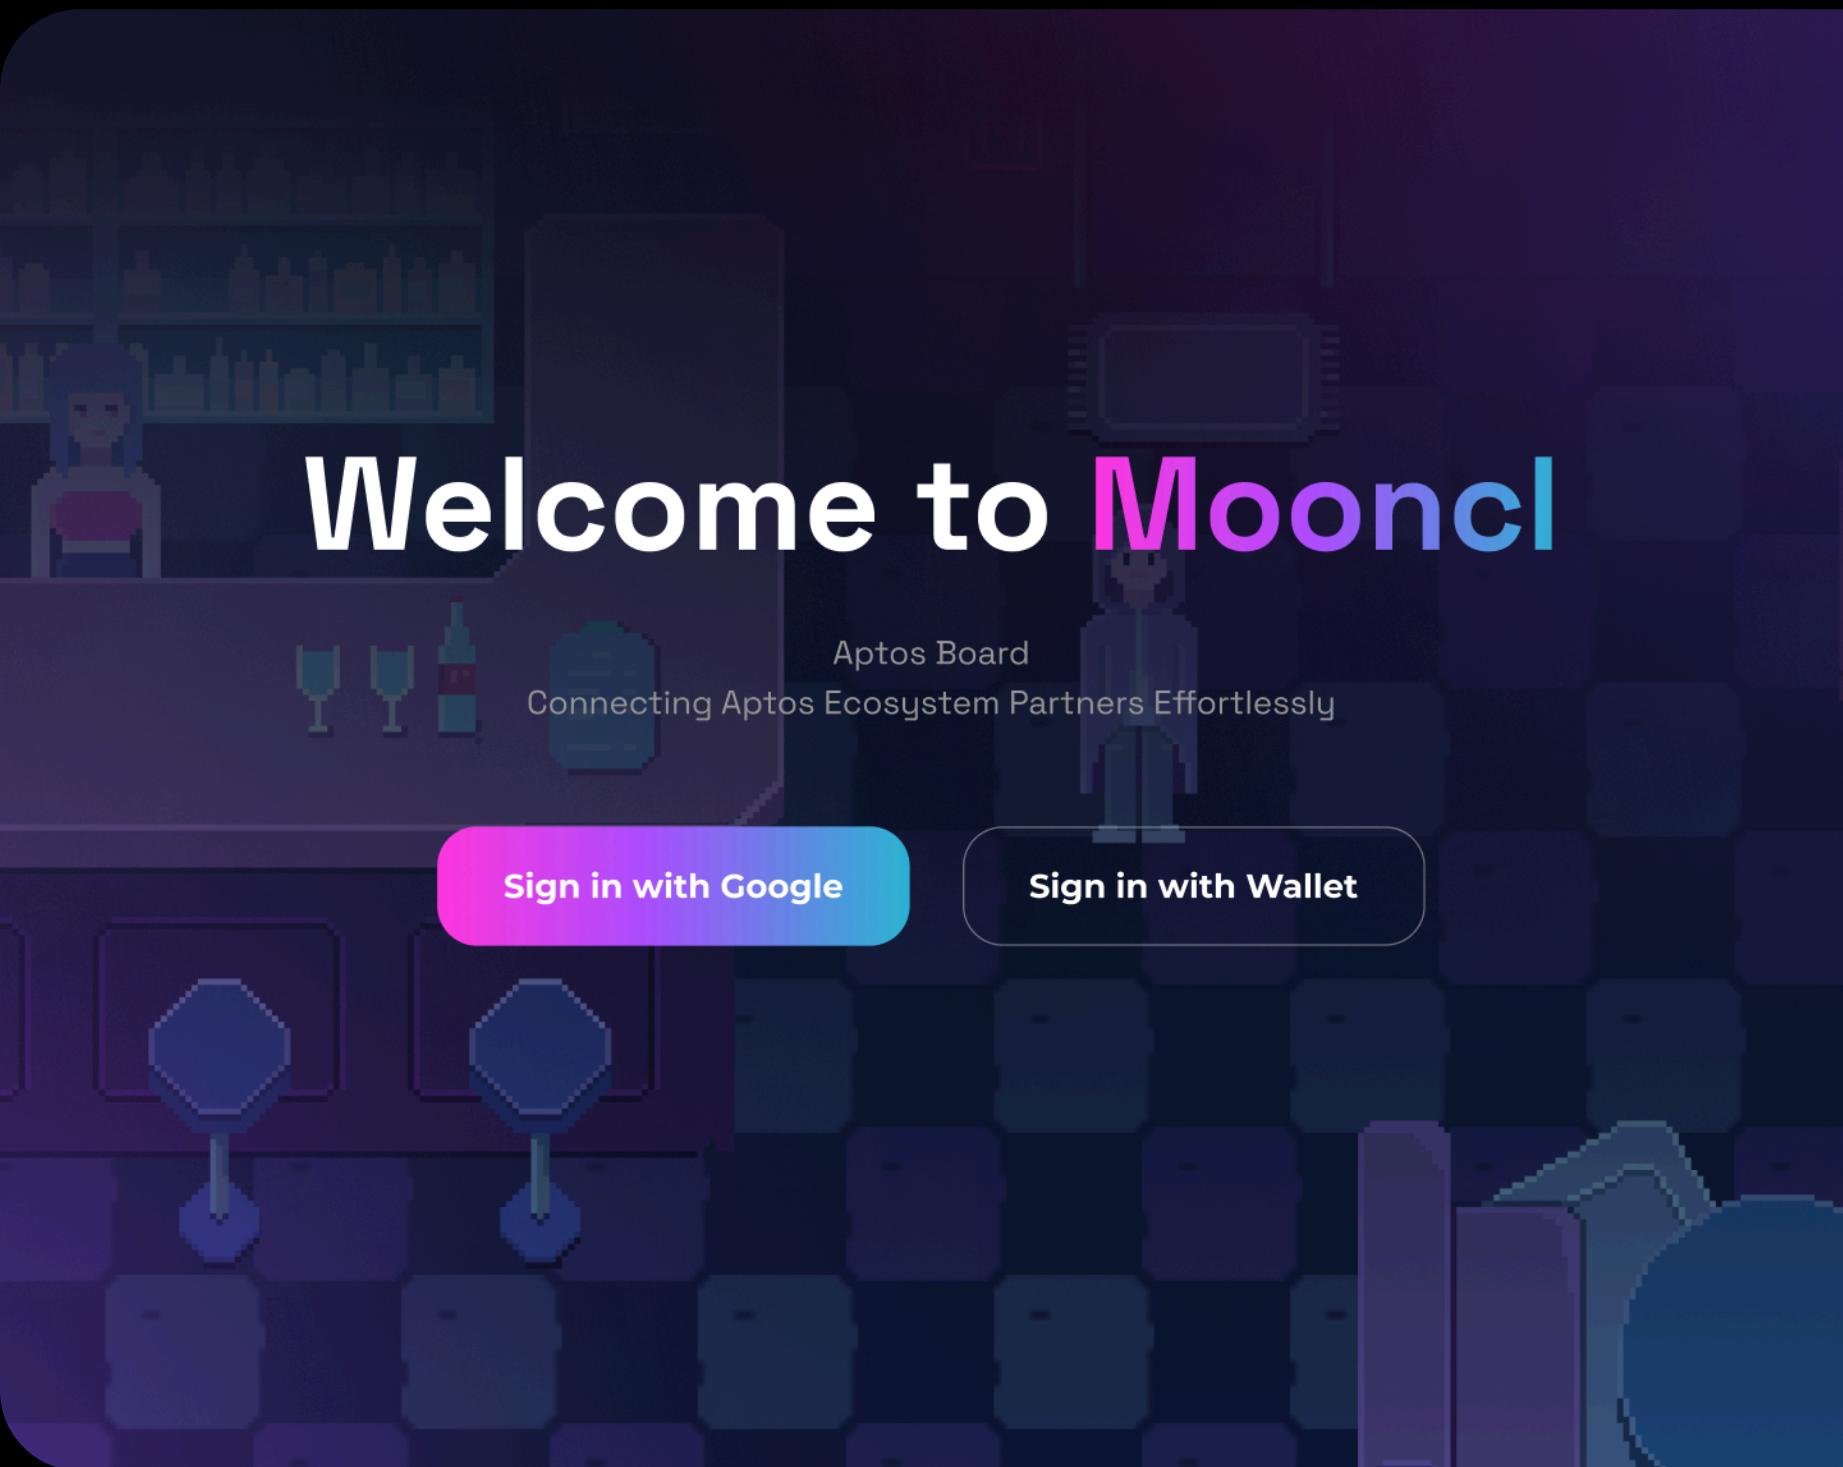

We use the Aptos SDK to query on-chain data and verify transactions, enhancing both the reliability and security of our platform.

AI Agent Layout

Our AI system uses retrieval-augmented generation, vector databases, and automated scoring to deliver smart matching, high-quality responses, and scalable collaboration.

➤ Target Customers

Developers, content creators, KOLs, and project teams in the Aptos ecosystem who are looking for collaborators

➤ Revenue Model

Mooncl charges APT for Promoted Posts that gain higher visibility across the platform. Users can also top up to access unlimited AI-powered partner matching.

➤ Go-to-Market Strategy

We'll promote Mooncl in Aptos communities and hackathons, connect with student builders, and partner with KOLs to grow early traction.
